### Message from the Guest Editors

The design of CMOS power amplifiers continues to pose challenges in the design of wireless transceivers because of the low breakdown voltage in CMOS devices, the no-substrate via-hole in the CMOS process, and the low quality of the passive components. In particular, a highly linear power amplifier is required because of the high peak-to-average power ratio and the wide bandwidth signal for 5G and next generation WLAN systems. Also, recent wireless communication standards require power amplifiers supporting dual or multi-bands. On the other hand, it is important to develop a tunable power amplifier that can minimize the efficiency degradation under impedance mismatch conditions.

Topics in this Special Issue include (but are not limited to):

- CMOS power amplifiers for 5G systems, LTE, WLAN, etc.
- CMOS power amplifiers with high power, high efficiency and/or high linearity
- Dual-band or multi-band CMOS power amplifiers
- Tunable CMOS power amplifiers
- Envelope tracking power amplifiers
- Doherty power amplifiers
- Outphasing power amplifiers
- Digital power amplifiers
- Transmitters with CMOS power amplifiers

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Electronics* is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guest-edited by leading experts in selected topics of interest.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Ei Compendex and other databases.

**Journal Rank:** JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Control and Systems Engineering*)
