Advances in Battery Management Storage for Electric Vehicles: When Models Meet Data

Message from the Guest Editors

Electric vehicles are emerging as the backbone of the sustainable development of transportation electrification. Their performance, safety, and reliability rely heavily on the energy storage system and battery management control strategies. Inappropriate battery operations may cause premature failures and catastrophic hazards. In recent decades, model-driven battery management strategies have gained considerable attention from various academic and industrial communities. This Special Issue inspires ideas related to all aspects of recent advances in model-driven and data-driven battery management technologies, and the ideas on how to fuse model-driven and data-driven frameworks into hybrid models that combine the best aspects of both. Potential topics including but not limited to :

- Modeling, estimation, control, and optimization for lithium-ion batteries
- Battery health/aging modeling, diagnosis and prognostics
- Optimal, fast, health-aware charging, balancing control
- Failure detection and fault tolerance control in battery management
- Applications of machine learning and artificial intelligence in battery management

About the Journal

Message from the Editor-in-Chief

Electronics is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guestedited by leading experts in selected topics of interest.

Editor-in-Chief

Prof. Dr. Flavio Canavero

Department of Electronics and Telecommunications, Politecnico di
Torino, 10129 Torino, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPus /
SciFinder, Inspec, Ei Compendex and other databases.

Journal Rank:

JCR - Q2 (Engineering, Electrical and Electronic) /
CiteScore - Q1 (Electrical and Electronic Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 16.8 days after
submission; acceptance to publication is undertaken in 2.4
days (median values for papers published in this journal in
the first half of 2025).
