

## Special Issue

# Advances in Photonic Neural Networks and Neuromorphic Computation

### Message from the Guest Editor

Brain-like computing has shown great advantages such as strong processing performance, simultaneous processing of multiple signals, and a low power consumption. According to research, the adult brain can perform 10<sup>16</sup> operations per second on average, and the energy required to perform these operations is only about 20 watts. Although the information processing technology based on microelectronics spiking neural networks has made great achievements, it has encountered bottlenecks as regards energy consumption and speed. The optical platform has great advantages in the field of information processing due to its unique advantages, including fast speed, large bandwidth, and low power consumption. Therefore, neural-like information processing based on the photonic spiking neural network has gradually become a frequently discussed research topic in recent years. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- Photonic neuromorphic systems;
- Photonic spiking neural networks;
- Information processing of neural-like properties;
- Synaptic-like properties.

## About the Journal

### Message from the Editor-in-Chief

*Electronics* is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guestedited by leading experts in selected topics of interest.

### Editor-in-Chief

Prof. Dr. Flavio Canavero

Department of Electronics and Telecommunications, Politecnico di Torino, 10129 Torino, Italy

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Ei Compendex and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Electrical and Electronic) /  
CiteScore - Q1 (Electrical and Electronic Engineering)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.4 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
