Special Issue

Machine Intelligent Information and Efficient System

Message from the Guest Editors

Recent years have witnessed the booming of machine intelligent systems, from online information systems to on-device hardware systems. Advanced machine intelligent systems are able to automatically collect data, analyze their patterns, and yield correct predictions and operations. In particular, the development of AI techniques have accelerated the research into machine intelligent systems, from largescale deep neural networks to lightweight on-device models. While significant progress has been made in the field of machine intelligence, there are still numerous limitations and challenges to achieving the full potential of these systems. One of the main challenges is the overwhelming amount of information that needs to be processed and analyzed for intelligent decision making. This is particularly intricate for largescale information systems, where large amounts of data can be exploited for accurate prediction and recommendation. There is also a huge requirement for efficient systems that can operate in real-time and dynamic environments and handle complex tasks at scale. It is, therefore, imperative to devise efficient and resilient algorithms and architectures.

About the Journal

Message from the Editor-in-Chief

Electronics is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guest-edited by leading experts in selected topics of interest.

Editor-in-Chief

Prof. Dr. Flavio Canavero Department of Electronics and Telecommunications, Politecnico di Torino, 10129 Torino, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Ei Compendex and other databases.

Journal Rank:

JCR - Q2 (Engineering, Electrical and Electronic) / CiteScore - Q1 (Electrical and Electronic Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
