Hybrid Energy Harvesting Systems: New Developments and Applications

Message from the Guest Editors

This Special Issue aims to address new trends in the modelling, design, and applications of the latest multi-source energy harvesting technologies, including those based on piezoelectric, electromagnetic, electrostatic, magnetostrictive, photovoltaic, thermoelectric, pyroelectric, and triboelectric effects. Research contributions may also focus on the energy-efficient integration of different subsystems, including power management and energy storage units, micro-controllers, antennas, and sensors.

About the Journal

Message from the Editor-in-Chief

Electronics is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guestedited by leading experts in selected topics of interest.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus /
SciFinder, Inspec, Ei Compendex and other databases.

Journal Rank:

JCR - Q2 (Engineering, Electrical and Electronic) /
CiteScore - Q1 (Electrical and Electronic Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 16.8 days after
submission; acceptance to publication is undertaken in 2.4
days (median values for papers published in this journal in
the first half of 2025).
