# Compressed Sensing in Signal Processing and Imaging

## Message from the Guest Editors

Compressive or compressed sensing is an approach in signal and image processing attracting enormous attention from researchers and developers in the area of the inverse synthetic aperture radar (ISAR) technology. The motivation for its exploitation is in overcoming the constraints of Nyquist–Shannon theorem in the sampling of signals and images; this is possible only if the image and respective ISAR signal are sparse, and the latter can be decomposed on the basis of particular functions such as discrete Fourier transform, discrete wavelet transform, discrete cosine transform, etc.

# About the Journal

## Message from the Editor-in-Chief

*Electronics* is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guest-edited by leading experts in selected topics of interest.

### Editor-in-Chief

Prof. Dr. Flavio Canavero Department of Electronics and Telecommunications, Politecnico di Torino, 10129 Torino, Italy

### **Author Benefits**

### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Ei Compendex and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Electrical and Electronic) / CiteScore - Q1 (Electrical and Electronic Engineering)

#### **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
