# Deep Learning for “Intelligent” Robots

### Message from the Guest Editors

In recent years, deep learning models represented by convolutional neural networks (CNNs), long short-term memory (LSTM) networks, and graph neural networks (GNNs) have achieved remarkable progress in many fields. The neural network exhibits a strong data nonlinear fitting ability, feature extraction and representation ability; flexible structure design ability; and cross-scenario generalization capability. Research areas may include: Intelligent robot for underwater exploration; Visual robot for navigation; Deep learning-based intelligent control system; Reinforcement learning-based path planning; Development and application of inspection and maintenance robot; Image processing driven by confrontation generation network; Optimization and generalization in deep learning; Hyperparameters setting in deep learning for robot control; Architecture design in deep learning for robot operation; Object detection; 3D reconstruction; Image classification.
