

Special Issue

Channel Characterization for Wireless and Mobile Communications

Message from the Guest Editor

The knowledge of the radio channel has historically been a fundamental element for the development of radio communications. Successive generations of mobile communications, from precursor analogue systems to the present day (5G and beyond), have been preceded by significant efforts to know and characterize the radio channel. Along with the development and deployment of the new mobile and wireless systems encompassed under the 5G, the characterization and modelling of radio channels in new frequency bands that are suitable for new technologies and new environments are topics of great interest. The main objective of this Special Issue is to contribute to the latest advances on channel characterization for wireless and mobile communications. The topics of interest include, but are not limited to the following:

- Channel models for mmW communications.
- Massive MIMO channel measurements and models.
- V2V channel characterization and modelling including high mobility.
- Three-dimensional models, spatial-consistency, and time evolution.
- Hybrid channel models.
- Models for special scenarios: tunnels, industrial, underwater, etc.
- Impact of channel in 5G system performance.

About the Journal

Message from the Editor-in-Chief

Electronics is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guest-edited by leading experts in selected topics of interest.

Editor-in-Chief

Prof. Dr. Flavio Canavero

Department of Electronics and Telecommunications, Politecnico di
Torino, 10129 Torino, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus /
SciFinder, Inspec, Ei Compendex and other databases.

Journal Rank:

JCR - Q2 (Engineering, Electrical and Electronic) /
CiteScore - Q1 (Electrical and Electronic Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
