

Topical Collection

Encyclopedia of Hygiene

Message from the Collection Editors

This collection is designed to combine scientific publications into a single collection of knowledge on hygiene and the impact of the environment on human health. It covers topics such as environmental pollution, electric and magnetic field waves, high-humidity conditions, heat shocks, climate change, non-communicable and emerging diseases, corrosive environments, vacuums, strong vibration, high impact and electrical loading, high levels of ultrasound and infrasound exposure, microplastics, new aero and food allergens, excessive ionizing radiation, etc. The impact of the environment on human health is becoming increasingly apparent, and it is essential to understand the causes and consequences of this impact. This collection provides comprehensive insights into the mechanisms of the interaction of environmental factors with the human body and the role of preventive measures in maintaining public health. We invite researchers and physicians to submit original manuscripts on topics related to hygiene.
