

Special Issue

Neuroendocrine, Endocrine and Metabolic Triggers of Impaired Female Reproduction

Message from the Guest Editor

When dealing with abnormal menstrual occurrence or with inability to conceive, many issues can be taken in consideration. Stress, impaired metabolism, PCOS, ovarian failure, endocrine diseases, excess physical activity, or psychodynamic aspects can be effective in negatively modulating the reproductive axis, resulting in a defective reproductive ability. This Special Issue aims to review the current knowledge and clinical experience of the many situations that have an impact on female reproductive function from adolescence to premenopause, from physiopathology to putative treatment options.

Guest Editor

Dr. Alessandro Genazzani

Department of Obstetrics and Gynecology, Gynecological Endocrinology Center, University of Modena and Reggio Emilia, Modena, Italy
