Deadline for manuscript
submissions:

7 August 2024

Message from the Guest Editors

Dear Colleagues,

The transition from traditional fossil fuels to renewable energy systems is a significant challenge to which modern economies must adapt. The shift towards renewable energy is not only necessary for environmental sustainability but also presents significant opportunities for economic growth and energy security. As well as responding to environmental imperatives, it represents an opportunity for economic growth, innovation, and global leadership in the new energy landscape.

Considering a wide range of theories, synergies and trends, this Special Issue aims to establish a dedicated framework for future acceptance of renewable energy system economics and policies. It will focus on the main challenges and opportunities for future acceptance of renewable energy systems economics and policy. New theories, synergies, constraints and trends in the field will be explored. Well-balanced theoretical and practical manuscripts on the acceptance of renewable energy system economics and policies are welcome.

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
