### Message from the Guest Editor

Dear Colleagues,

This Special Issue aims to publish articles that provide novel insights, theories, and solutions for smart grids viewed as cyber-physical systems. The subject areas may range from methods for the analysis of complex energy systems, where advanced mathematics and measurement techniques are used to tackle the complexity of future smart grids stemming from renewable generation, from the management of flexibility and storage, to vehicle-to-grid challenges, and planning and scheduling under increased uncertainty, to name a few.

Prof. Dr. Tamás Keviczky

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Control and Optimization)
