Advanced Decision-Making Methods for Hybrid Energy System Planning and Management under Complexities and Uncertainties

Guest Editors:

Dr. Ling Ji

Dr. Zaoli Yang

Prof. Dr. Yulei Xie

Deadline for manuscript submissions:
closed (21 August 2022)

Message from the Guest Editors

A hybrid energy system with renewable energy sources, combined heat and power generation, and energy storage devices is a promising option to improve system efficiency, enhance energy supply reliability, and promote traditional energy system transition. Sustainable planning and operation management of the hybrid energy system are two critical issues that need to be addressed. However, various factors need to be considered when implementing a hybrid energy system. Meanwhile, intermittent renewable energy generation, complementary of multi renewable energy sources, stochastic energy demand, fluctuant energy prices, as well as ambiguous policy bring great challenges to decision makers. Despite the fruitful literature, more advanced decision-making tools and multidisciplinary methods are desired to address the outstanding challenges in the planning and management of hybrid energy systems under various complexities and uncertainties.

We welcome original research articles, reviews, case, and analytical studies, as well as papers from different disciplines, which are relevant to advanced decision-making methods for hybrid energy system planning and management.

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.
Journal Rank: CiteScore - Q1 (Control and Optimization)
