## Fault Current Limiters: Technologies, Applications and Field Experience

Guest Editors:

**Dr. Agurtzane Etxegarai**

Department of Electrical Engineering, Faculty of Engineering Bilbao, University of the Basque Country UPV/EHU, Bilbao, Spain

**Dr. D. Marene Larruskain**

Electrical Energy Systems Research Group (GISEL), Electrical Engineering Department, Bilbao School of Engineering, University of the Basque Country UPV/EHU, Bilbao, Spain

Deadline for manuscript submissions:

**closed (30 November 2022)**

### Message from the Guest Editors

Dear Colleagues,

Fault current levels are enlarging as a result of the evolution of the power system. The power flows in transmission and distribution lines are increasing basically on account of the integration of new generation sources in addition to the demand rise. An appropriate management of those elevated fault currents is imperative for the correct and reliable operation of the power system.

Both conventional and innovative techniques for dealing with this challenge have been proposed in the literature and used on field. Technical details and operational experiences as well prospective feasibility studies are welcome in this Special Issue. Superconductivity based FCLs are of particular interest, due to the elevated level of development and diversity of applications.

Fault current limiting techniques must fit into the protection of forthcoming power systems. Therefore, this Special Issue covers -but it is not limited to- HVDC or hybrid AC/DC systems, as well as highly meshed grids.

We encourage submissions in all degrees of detail, from simulation models to higher detailed models, such as FEM, or prototypes and field experience.

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (*Engineering (miscellaneous)*)
