## Sources and Markets of New Energy Minerals for Renewable Energy Generation and Storage

Guest Editor:

**Prof. Dr. Krzysztof Galos**

Mineral and Energy Economy  
Research Institute, Polish  
Academy of Sciences, 31-261  
Kraków, Poland

Deadline for manuscript  
submissions:

**closed (30 June 2022)**

### Message from the Guest Editor

A key factor limiting the expected development of the use of solar and wind energy is the availability of the minerals that are absolutely crucial to the production of wind turbines, photovoltaic cells, and new generations of batteries, accumulators, and large-scale energy storage systems.

Demand for many of these minerals over the next 30 years may be 4–12 times higher than their current total production, which may be a significant factor limiting the development of the use of these leading renewable energy sources.

In this context, this Special Issue aims to present the results of research on various aspects of the management, sources (existing and possible), and markets of the abovementioned minerals, which are currently used or may in the future be used for the production of wind turbines and photovoltaic cells and batteries, taking into account the issue of the security of their delivery within mineral policy frameworks at an individual country level and the international level.

- minerals for renewable energy generation and storage
- mineral markets
- mineral security
- mineral policy

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (*Engineering (miscellaneous)*)
