UK

Dr. Muhammad Ismail

Department of Computer
Science, Faculty of Engineering,
Tennessee Tech University,
Cookeville, TN, USA

Deadline for manuscript
submissions:

closed (30 April 2022)

Message from the Guest Editors

Dear Colleagues,

As part of the net-zero emission goals, the future of electric power grids is currently shaped by higher penetration levels of renewable energy sources, increasing adoption rates of plug-in electric vehicles (PEVs), and electrification of heating and cooling appliances. This transformation calls for dynamic energy management and scheduling of demand-side activities that can be realized by employing a set of enabling technologies such as wireless networks, smart meters, internet-of-things (IoT)-based sensors, and intelligent load switches. Demand response (DR) schemes have emerged as a way to shape electricity consumption profiles to optimize the operational costs typically defined as a combination of electricity prices, customer comfort, and load flexibility.

This Special Issue is an ideal venue to make innovative contributions to novel architectures, optimization, and control of DR. We invite field experiments, simulation-based, and/or analytical studies with well-elaborated realistic case studies and real-world datasets.

Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
