Economic Development and the Audit Function in the Energy Sector

Guest Editor:

Message from the Guest Editor

Dr. Melinda Tímea Fülöp

Faculty of Economics and
Business Administration, Babeş-
Bolyai University, 400591 Cluj-
Napoca, Romania

Dear Colleagues,

Deadline for manuscript
submissions:

closed (31 January 2022)

The entire energy sector is subject to profound change. Market liberalisation and re-municipalisation, the expansion of the internal European market, the growing share of renewable energy, decentralisation of production, high-cost pressure and ambitious climate change targets are the drivers of this change. They pose unprecedented economic and technical challenges for grid operators and suppliers. At the same time, they offer market players unprecedented opportunities. Fierce competition between the various energy suppliers and grid operators will continue in the coming years. In the face of increasingly dynamic funding and regulatory systems, business models are also subject to severe transformation and adjustment pressure. However, a recurring issue in the energy sector is trust. By implementing tools and technology that harness data and information, we can monitor and verify activity and identify potential breaches before they occur; this objective can be achieved through the audit function, thus contributing to the restoration of trust.

We are looking forward to receiving your contributions.

Department of Mechanical and
Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
