Deadline for manuscript
submissions:

closed (30 November 2021)

Message from the Guest Editors

Energy supply is crucial for the agricultural sector to ensure its sustainability and continuous delivery of its key functions. This has to be performed in harmony with the existing and future challenges, including (but not limited to) economic, social, and environmental. While efficient energy generation for the needs of agricultural production is important, it is also agriculture that provides renewable energy to other economy sectors, thus being a key element of the complex energy generation system.

This issue welcomes papers related to existing and possible challenges, acting and feasible policies and mechanisms to ensure achievement and maintenance of a) sustainable agricultural production through the subsistent supply of energy, and b) generation of renewable energy by the agricultural sector to be distributed through the market to other economic sectors. The issue especially encourages multidisciplinary approaches (combining economics, engineering, sociology, management, psychology, geography, philosophy, etc.) and various quantitative techniques (including econometrics, modeling, bibliometric studies, system and network analyses).

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
