

Fault Location and Management in Electrical Power Distribution Networks

Guest Editor:

Dr. Alireza Bahmanyar

Department of Electrical
Engineering and Computer
Science Montefiore Institute,
University of Liège, 4000 Liège,
Belgium

Deadline for manuscript
submissions:

closed (23 August 2023)

Message from the Guest Editor

These days, there is a considerable and continuous increase in the reliance of the functions of modern societies on electricity, calling for a much higher service quality than before. Considering that approximately 80% of customer power interruptions occur due to distribution faults, distribution system managers need to enable fast and efficient fault management to ensure service quality. The process usually includes fault location, isolation, and service restoration. The Guest Editor is inviting submissions to this Special Issue.

Topics of interest for publication include, but are not limited to:

Literature review, classification of techniques and their comparison; Challenges in distribution fault management and in the practical application of fault location techniques; Challenges and techniques for fault management for non-effectively grounded networks; High impedance fault location in distribution networks; Fault management and location techniques for active distribution networks; Fault management in AC/DC Microgrids; Innovative fault management and location techniques for smart grids; Innovative application of artificial intelligence for fault management and location.

energies

an Open Access Journal by MDPI

Editor-in-Chief

Department of Mechanical and Industrial Engineering, University Niccolò Cusano, 00166 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compindex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
