Deadline for manuscript
submissions:
closed (10 October 2019)

Message from the Guest Editors

With carbon-based resources facing depletion and concerns about climate change, energy geotechnology must play a key role in the development of a sustainable energy scheme involving energy resources, such as natural carbohydrates, nuclear energy, and renewable sources (wind, solar, geothermal, hydropower, biofuels, and tidal and wave energy), but it must not be restricted. Moreover, geotechnical engineering is required to provide new techniques to preserve the environment from a sustainability perspective, including CO₂ emission and energy-related wastes reduction, as well as the introduction of new, environmentally-friendly, and low-carbon emitting materials for geotechnical engineering practices.

The Special Issue welcomes contributions to resolve energy and environment-related geotechnical engineering issues from fundamental research to practical implementation scales. The aim of this Special Issue is to provide a source of ***Geomechanics for Energy and a Sustainable Environment*** that deals with conventional and renewable energy sources, recent attempts in CO₂ and industrial waste decution, and the development of new materials/methods for sustainable development.

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access:— free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, AGRIS, Inspec, CAPlus / SciFinder, and many other databases.

CiteScore (2019 Scopus data): 3.8; ranked 19/101 (Q2) in "Control and Optimization", 62/216 (Q2) in "Energy Engineering and Power Technology", 208/670 (Q2) in "Electrical and Electronic Engineering", 33/98 (Q2) in "Fuel Technology", 9/23 (Q2) in "Energy (miscellaneous)", and 72/179 (Q2) in "Renewable Energy, Sustainability and the Environment".
