Fast-Running Engineering Models of Wind Farm Flows

Guest Editors:

Dr. Majid Bastankhah

Department of Engineering,
Durham University, Durham DH1
3LE, UK

Dr. Ervin Bossanyi

1. Faculty of Engineering, Bristol
University, Bristol BS8 1TS, UK
2. DNV, One Linear Park, Avon
Street, Bristol BS2 0PS, UK

Dr. Dries Allaerts

Faculty of Aerospace
Engineering, Delft University of
Technology, Kluyverweg 1, 2629
HS Delft, The Netherlands

Deadline for manuscript
submissions:
closed (10 April 2023)

Message from the Guest Editors

Despite the rapid growth of flow measurement technologies and numerical simulation techniques over the last few decades, fast-running engineering models are still the most popular tools in industry to characterise and predict wind farm flows. This is mainly due to their low computational costs and ease of use. These models, which can be empirical or physics-based, cover a wide range of topics including but not limited to:

- **Turbine wake flows**
- **Cumulative wake effects**
- **Load estimation**
- **Flow blockage**
- **Topography and wind farms**
- **Wind farm power production**
- **Wind farm control**
- **Wind farm interaction with the atmospheric boundary layer**
- **Thermal stability and Coriolis force**

The aim of this Special Issue is to gather new original research either on the **development of new fast-running engineering models** or the **application of existing models** in different fields of wind energy research mentioned above, and beyond.

Department of Mechanical and
Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
