## Novel Materials for Energy Efficient Buildings

Guest Editors:

**Prof. Dr. Nicola Bianco**

Department of Industrial  
Engineering, Università degli  
studi di Napoli Federico II,  
Piazzale Tecchio 80, 80125  
Naples, Italy

**Prof. Dr. Fabrizio Ascione**

Department of Industrial  
Engineering, University of Naples  
Federico II, 80138 Napoli NA, Italy

Deadline for manuscript  
submissions:

**closed (25 July 2019)**

### Message from the Guest Editors

Energy retrofits have higher difficulties compared to new buildings, because of the necessity of adaptability to existing constructions, the requirement of low thicknesses, and the preferability of technologies that allow installation without invasive yards for allowing livability during the refurbishing. Novel materials can exploit several physical phenomena for reducing energy demands of buildings and emissions. Furthermore, materials can improve the thermal resistance or thermal inertia of the building shell; the reflectance or absorptance of solar energy of external coatings; the thermal energy storage in structures; and the time shifting of free gains, radiative cooling, or evaporative cooling; and, analogously, they can have applications in active energy systems too (as, for instance, phase change materials into components of heating and cooling systems or new lighting systems and photovoltaics by means of novel organic materials). This Special Issue of *Energies* is entirely focused on new materials for the energy efficiency of buildings and energy systems and is not limited to buildings themselves, their energy systems, or renewables on a building scale.

Aerospace Engineering,  
University of Roma Sapienza, Via  
Eudossiana 18, 00184 Roma, Italy

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (*Engineering (miscellaneous)*)
