Message from the Guest Editors

Dear Colleagues,

New and emerging perovskite solar cells (PSCs) are approaching the conversion efficiency of 24% mark. These material-based solar cells have adopted ABX₃ perovskite structure based organic–inorganic hybrid compounds. From the commercialization point of view, PSCs can offer lower production cost with higher conversion efficiency than the silicon or thin film solar cells. However, the stability of the devices and concern regarding toxic materials usage are the major challenges for their commercialization. This Special Issue focuses on the issues of stability, scalability, and environmental and economic concerns regarding PSCs. Moreover, this special issue will give complete overview on the issues related to the PSC commercialization.

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
