

## Special Issue

# Novel Energy Management Approaches in Microgrid Systems

### Message from the Guest Editors

Due to large amounts of distributed generation (DG) connected lately to the low-voltage (LV) and medium-voltage (MV) networks, many important issues have risen: (a) some parameters of the grid cannot be measured accurately, (b) more renewable energy units are difficult to connect to the grid, (c) regular maintenance activities are now difficult or even prohibited due to the thermal capability or to voltage values, and (d) electricity grid protection has become more complicated now. Therefore, reliable, cost-effective communication and control schemes are needed in order to ensure the stable operation of the grid and keep the power quality indices inside their limits. These energy management schemes should ensure: (a) reliable measurement, (b) interoperability of different communication protocols, (c) new control schemes and techniques of distributed generation with low cost intervention and legal compatibility, and (d) that the new devices on the grid must be taken into account, such as energy storage, electric vehicles and their charging systems.

## About the Journal

### Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

### Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University  
Niccolò Cusano, 00166 Roma, Italy

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Control and Optimization)
