Design and Monitoring Technology for Diesel-Electric Hybrid Power System

Message from the Guest Editors

The most advanced mild hybrid diesel engines offer modest savings (in the order of 10 percent) in the field of city emissions, but just outside urban centres, the technologies with an integrated starter alternator and sailing functions in force of the most advanced large models have countless advantages. Among these, with distances of more than 1000 kilometres with a full tank, Euro 6-Dtemp light hybrids that are currently on the market are fluid, silent, and powerful and suffer very little from the driving style. Moreover, not having heavy battery packs to transport as happens with full or plug-in hybrid cars, fuel consumption on the highway (when the contribution of any hybrid system is very low due to high speeds) remains low even when driving D and E segment models. The extra costs required for plug-in cars are justified only in the daily recharging of the battery pack in order to take advantage of the full-electric distance (between 40 and 100 km depending on the model) in urban centres and surroundings. However, it must be said that when traveling without residual electrical sap, the battery pack of the plug-ins is a substantial additional weight.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University
Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
