Special Issue

Application of Renewable Energy in Production and Supply Chain Management II

Message from the Guest Editor

Nowadays, environmental issues are very prominent, which involve seeking to reduce the effect of global warming. The increasing rate of carbon emission due to industrialization is one of the causes of global warming. Renewable energy resources are naturally replenishing fuel sources, most notably solar, wind, biomass, geothermal, and hydro power. Unlike nuclear power and fossil fuels (coal, oil, and natural gas), renewables provide clean, safe, and reliable power, with low-carbon emissions. Thus, applying renewable energy in production and supply chain management is very much essential to protect the environment. The idea of applying renewable energy in supply chain management is to enhance environmental sustainability. As environmental sustainability is very crucial nowadays for the industrial sector, the aim of this Special Issue is to combine a revolution of the industrial sector with sustainable supply chain management under the influence of renewal energy. The objective of this Special Issue is the improvement of the inventory, production, supply chain management, and logistics regarding sustainability under the surveillance of supply channels.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba
Department of Mechanical and Industrial Engineering, University Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
