

## Special Issue

# Advances in Coal, Biomass and Biowaste Processing Technology

### Message from the Guest Editor

The increasing carbon dioxide emissions involved in addressing the increasing energy demand is one of the major environmental concerns of the contemporary coal-based energy sector. Wider use of biomass and biowaste in power generation may contribute to diversification of the world energy supplies, and mitigation of greenhouse gas emissions.

Notwithstanding the particular emphasis put on the use of renewables in the development of sustainable energy systems, coal will still remain the major energy resource because of its abundance, wide geographic distribution and price competitiveness according to the forecasts of energy use structure by 2050. This Special Issue is, therefore, devoted to the current challenges and latest developments in widely understood thermochemical conversion of coal, biomass and biowaste (combustion, gasification, pyrolysis, liquefaction) to different products (heat, power, hydrogen, substitute natural gas, methanol, liquid fuels, etc.). Various aspects of thermochemical utilization of coal for energy purposes, ranging from technological, through process integration to economic and environmental are the main thematic areas covered by this Special Issue.

## About the Journal

### Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Control and Optimization)
