

## Special Issue

# Condensation Heat Transfer

### Message from the Guest Editor

Condensation heat transfer is ubiquitous in nature and our daily lives, and substantial to various engineering applications such as energy production/harvesting and HVAC&R (heating, ventilation, air conditioning, and refrigeration). In addition, due to the recent advances in nanoengineering and demands on heat exchangers for higher energy efficiency or concentrated thermal loads for cooling, numerous types of research are ongoing in micro- or nanoscale condensation heat transfer. This topical Issue will be dedicated not only to fundamentals and theoretical works but also to applied, numerical, and experimental research. *Energies* has broad authorship and readership, not only in applied science such as mechanical/electrical/chemical engineering and material science but also in fundamental science such as physics, mathematics, and chemistry.

Interdisciplinary studies will be highly appreciated. We are looking forward to introducing a novel and fascinating original research article or an insightful review article on the recent advances in the field of condensation heat transfer.

---

## About the Journal

### Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Control and Optimization)
