

Special Issue

Development and Implementation of Models of Electricity Market 2020

Message from the Guest Editor

Market modelling in the framework of smart networks is a crucial aspect of the power system of the future. Market modelling plays a crucial role in competition and regulation to improve the end-to-end efficiency of the electric power system. With this Special Issue, we are looking for contributions on the development of new market models that can improve the integration of bulk power systems and local regional power systems. For example, it is well known that regulatory and business models are essential to design efficient markets for renewables and variable demands. It is then essential to design markets that can deal with an increasing complexity and number of components and virtual entities.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University
Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
