New Perspectives and Regulations for Logistics, Management Processes and Renewable Energy Sources

Message from the Guest Editors

Renewable energy sources are also an integral part of energy policies at national, supranational (EU) and global levels. The constant development of regulations raises problems from the legal compliance perspective for companies operating on this market. Equally important are questions about the limits of state aid for this sector of the economy, which affects the competitiveness of enterprises. The impact of legal norms on the efficiency of power plant management and cooperation with the state administration also remains significant. In this context, theoretical and practical studies of energy problems related to logistics and management and quality sciences are needed. We welcome original articles that provide new information in these areas.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University
Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
