Special Issue

High Power Converters: Topologies, Control and Applications

Message from the Guest Editors

Demands of power conversion systems in high power applications are constantly changing, and research areas are evolving toward a wide range of voltage and power. The main challenge lies in developing high power converters and their controls in industrial and transportation applications, such as high voltage DC transmission, reactive power compensation, rail power conditioners, renewable energy conversion. These converters must be more efficient, reliable, and fault-tolerant to enable secure and high-quality operation while reducing maintenance and overall costs.

This Special Issue is intended to bring together innovative developments and future trends in power converter technologies and advanced control methods in high power applications.

Topics:

high-power converter topologies
advanced multilevel converters
modular multilevel converters
pulse width modulation schemes
fault-tolerant converter topologies
high voltage dc transmission
reliability of high-power converters
renewable energy systems

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba
Department of Mechanical and Industrial Engineering, University Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
