

Special Issue

Sustainable Energy Management of Buildings and the Integration with BIM Technologies

Message from the Guest Editors

Due to the information capacity, the IoT and new building techniques, we are witnessing a new challenges era, centred in sustainability. The new manufacturing structures, the access to the information before, during and after a renovation or new construction will create a new industry paradigm, generating massive digital information that can be used to take more accurate decisions on the elements production, control and planning. Many new areas are working together to create successful models, ontology and methodology in this new context. These new methodologies will improve the efficiency of the processes and achieve less wasteful production. This Special Issue of the journal *Energies* will be focused on sustainable energy management of buildings and the integration with BIM technologies. We invite researchers to contribute original and unique articles, as well as sophisticated review articles. Topics include, but are not limited to, the following areas:

- Energy management models
- Building energy model (BEM)
- Building information modelling (BIM)
- Energy in buildings
- Data fusion and integration for BIM control

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba
Department of Mechanical and Industrial Engineering, University
Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
