

Special Issue

Life Cycle Assessment (LCA) of Renewable Energy Technologies

Message from the Guest Editors

This Special Issue aims to evaluate the impacts of energy technologies and strategies, both at the supply and demand side level. Life Cycle Analysis (LCA) is widely recognized as the most advanced approach to obtain verified and comparable information on the environmental performance of products, technologies and services on a qualitative and quantitative basis throughout their entire life cycle. Lately, the life cycle concept has also become important in environmental policy, supporting the transition to a green economy. This Special Issue aims to present the state of the art of green technologies for energy generation and storage from the perspective of decarbonizing the global energy system, with a specific focus on renewable technologies and buildings. LCA allows the assessment of long-term impacts of renewable energy technologies and energy efficient buildings, and it can be useful in the development and improvement of energy strategies since it allows to compare different solutions.

Guest Editors

Prof. Dr. Giambattista Guidi

Department of Energy Technologies and Renewable Energy Sources, ENEA, Italian National Agency for New Technologies, Energy and Sustainable Economic Development, Via Anguillarese, 301, 00123 Rome, Italy

Prof. Dr. Francesco Asdrubali

Department of Industrial, Electronic and Mechanical Engineering, Roma Tre University, Via Vito Volterra, 62, 00146 Roma, Italy

Deadline for manuscript submissions

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University
Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
