

Special Issue

Advances in Multi-Agent Systems for Grid Energy Management

Message from the Guest Editors

A multiagent system is an integrated system with numerous sophisticated algorithms that communicate with one another to accomplish a set of goals or perform activities. An agent is a piece of software that takes autonomous, intelligent, or pre-set actions to help the system accomplish its goals. The addition of highly intermittent and unpredictable distributed energy supplies to the energy management system adds to the system's complexity. As a result, the traditional control employed in micro-grid EMS is no longer effective, necessitating other control systems that can manage the altered system dynamics. A decentralized artificial intelligence technology called a multiagent system, adapted from computer science, can realize this function effectively due to its inherent autonomy, scalability, flexibility, and adaptability. Considering the above requirement, this Special Issue will highlight articles presenting the latest findings in the trending research area of “multiagent systems”.

Guest Editors

Dr. V Indra Gandhi

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University
Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
