Special Issue

Magnetic Material Modelling of Electrical Machines

Message from the Guest Editors

Electromechanical energy conversion takes place in electrical motors, generators, and actuators. The efficiency and effectiveness of the conversion process depends on both the design of the devices and the materials used in these devices. Furthermore, the design process of the said devices is today carried out through extensive numerical field computations. The correctness and accuracy of these computations depend on the quality of the material models used. In this issue, we focus on different materials models and their usage in the finite element simulation of electrical motors, generators, and actuators. The modeling of properties such as hysteresis, alternating and rotating losses, and demagnetization are of interest, but also characterization of the materials and their dependency on mechanical quantities such as stresses and temperature are welcome. Both simulation methodologies and material models will be considered.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba
Department of Mechanical and Industrial Engineering, University Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
