## Special Issue

# Design of Materials for Solid State Hydrogen Storage

## Message from the Guest Editor

Among the different solid-state hydrogen storage systems, complex and conventional metal hydrides have drawn significant attention because of their remarkable gravimetric and volumetric capacities. The kinetics and thermodynamic destabilization of these materials can be improved either by nanocrystallization and/or by different additives. Nanocrystallization based on severe plastic deformation can be processed via high energy ball milling (HEBM), equal channel angular pressing (ECAP), and cold rolling (CR). Adding catalysts, like transition metals, their oxides, and carbon-based materials, have a substantial impact on the effectiveness of hydrogen storage. This Special Issue would like to encourage the submission of original contributions regarding recent developments on materials synthesis for efficient hydrogen storage by processing techniques based on severe plastic deformation. Keywords: hydrogen storage; metal hydrides; complex hydrides; catalysts; carbon-based additives; sever plastic deformation; ball-milling; equal channel angular pressing; cold rolling

## **About the Journal**

## Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University Niccolò Cusano, 00166 Roma, Italy

## **Author Benefits**

## **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

## **High Visibility:**

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

## Journal Rank:

CiteScore - Q1 (Control and Optimization)
