Advances in Relay Protection Solutions for Modern Power Distribution Networks

Message from the Guest Editors

The importance of robust relay protection in power distribution networks has grown significantly with the increasing complexity and dynamic nature of modern power grids. As we integrate more renewable energy sources and advanced technologies, the task of ensuring reliable and efficient power delivery becomes ever more challenging. Distribution system operators (DSOs) must ensure a delicate balance between maintaining system stability and accommodating the diverse interests of stakeholders. In this dynamic environment, the role of relay protection is critical. Effective relay protection schemes safeguard the distribution network from faults and anomalies, ensuring minimal disruption and damage. The integration of advanced control and monitoring systems further enhances the ability of DSOs to respond swiftly and accurately to faults, thus maintaining the integrity and performance of the power system. This Special Issue aims to explore the optimization of relay protection strategies used in power distribution networks, focusing on the integration of control and monitoring technologies to improve overall system reliability and efficiency.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University
Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
