

Special Issue

Advancement of Experimental and Modeling Approaches for Development of Hydrogen Energy Systems

Message from the Guest Editor

Hydrogen is a promising clean energy carrier for the future environmentally friendly economy, as hydrogen can be produced by renewable energy sources and used as a fuel by releasing energy when reacting with oxygen without emitting harmful pollutants. In this Special Issue, researchers working on hydrogen energy systems will present contemporary and novel modelling approaches and experimental techniques that will help advance the elements of hydrogen energy systems. The scope of such methods and test systems is very broad. Some examples include novel and improved liquefaction cycles and associated hardware, the storage of liquid hydrogen and highly compressed gaseous hydrogen, fuel cells, hydrogen combustors, correlations for heat transfer and pressure drop in two-phase hydrogen flow, cryogenic pumps and metering devices, instabilities in hydrogen systems, hydrogen safety, materials for hydrogen, ortho-parahydrogen conversion, techno-economic analysis, and other topics relevant to hydrogen energy systems.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University
Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
