Pre-treatment Methods for Biogas Plants

Message from the Guest Editors

We invite you to submit papers within the scope of pre-treatment of various feedstock for biogas production. Biogas production is increasing worldwide and will play a more significant role in energy supply in the coming years. Further, it is a method to decrease GHG emissions together with possible carbon sequestration. The success of the usage of biogas technologies relies on using the right technology for pre-treatment. Pre-treatment of feedstocks for anaerobic treatment could lead to increased degradation and a higher rate constant. Increased degradation will result in higher biogas yield, and a higher rate constant will result in a shorter retention time. The methods of pre-treatment could be divided into physical, chemical, and biological. The chosen pre-treatment method can vary according to the feedstock; lignocellulosic material, proteins, and lipids can have origins of terrestrial or marine. Another way of distinguishing the feedstocks is vegetables or animal origin. The feedstocks could be energy crops or waste.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University
Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
