Special Issue

Biomass Fast Pyrolysis 2020

Message from the Guest Editors

The depletion of fossil fuels and the environmental awareness associated with their impact is promoting the development of processes aimed at the production of fuels and chemicals from renewable sources. In this scenario, fast pyrolysis is a promising thermochemical route for the full-scale production of renewable fuels and chemicals from biomass. Moreover, fast pyrolysis allows on to convert low-density biomass into bio□oil, which is a denser liquid that can be stored and transported. Although great attention has been paid to this process, fundamental aspects, such as the reaction mechanism, reactor design, and product final applications, remain unsolved. In fact, the direct utilization of crude bio-oil is hindered by its poor quality (water and oxygen contents, viscosity, low energy content, and corrosiveness). Several strategies have been proposed in order to improve the quality of the products obtained from biomass fast pyrolysis. Thus, catalytic fast pyrolysis (either in situ or in line) is an interesting alternative for enhancing bio-oil quality and selectively producing valuable chemicals (such as aromatics and light olefins).

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba
Department of Mechanical and Industrial Engineering, University Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
