Special Issue

Cloud Computing Systems and Energy Efficient Utilization

Message from the Guest Editor

Cloud computing systems have demonstrated exponential growth over the last decade and quickly become the dominant computing infrastructure. By the end of 2020, two-thirds of enterprise infrastructure will be cloud-based; additionally, 82% of the workload will reside in the cloud (https://techjury.net/statsabout/cloud-computing/). Therefore, any improvements in the energy efficiency of cloud systems will also improve the global energy efficiency of computing. This Special Issue invites submissions addressing all aspects of energy efficiency in cloud computing systems at all levels. Manuscripts reporting accurate application-level power and energy predictive models, and energy measurement methods and tools are particularly welcome. Methods on the optimization of multiple objectives are also welcome but must include energy consumption as one of the primary objectives.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
