

## Special Issue

# Monitoring and Distributed Control for Power Systems

### Message from the Guest Editor

The power distribution system now integrates energy communities and microgrids, including DC grids, different energy vectors (e.g., electricity and gas), new loads (e.g., e-vehicle recharging stations), renewable energy sources, and storage. Business level changes affect the roles of distribution system operators, their relation to transmission system operators, aggregators, third party service providers. The digitalization of the entire sector results in new concepts for platforms, applications, and services. Use, production, and protection of data relevant to the power system is key to these developments. In this context, the development of new monitoring and control solutions is proceeding at a fast pace to handle the complexity and to adapt to dynamically changing operating conditions, including extreme cases, such as reconfiguration and black start. This [Special Issue](#) will present the concepts, technologies, methods, and applications that promise to push the active electrical distribution systems forward.

## About the Journal

### Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Control and Optimization)
