

Special Issue

Organic Waste/Resources to Energy and Value added Product

Message from the Guest Editor

Energy is the backbone of modern civilization. To have a sustainable world, we must diversify our resources and find alternative sources of these commodities. Also, there is no such thing as waste. The theme of this Special Issue is that "waste" is "a co-product of a process looking for an opportunity." This Special Issue features recent research papers in the field of waste to energy and resource recovery (WTERR). We would like to explore all aspects of the on-going discussion on waste to energy and resource recovery: its management, the role and needs of different actors, and WTERR technologies' and policies' impacts on societies. Our main interest is in studies that advance our knowledge and inform the development of next-generation technologies and solutions.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University
Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
