Special Issue

Demand-Response in Smart Buildings

Message from the Guest Editors

We would like to invite you to contribute to a Special Issue, entitled "Demand-Response in Smart Buildings". Demand response (DR) is a reduction in demand designed to reduce peak load or avoid system emergencies. Hence, it can be more cost-effective than adding generation capabilities to meet the peak and/or occasional demand spikes. The underlying objective of DR is to actively engage customers in modifying their consumption in response to pricing signals. Demand response is expected to increase energy market efficiency and security of supply, which will ultimately benefit customers by way of options for managing their electricity costs leading to reduced environmental impact. This Special Issue is focusing on the coupling of demand response with smart buildings and communities with the aim of covering alternative demand response approaches, case study analyses, research trends and necessary transformations in smart buildings and communities to be able to successfully implement demand response.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Industrial Engineering, University Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
