Special Issue

Sustainable Development Concept of Innovative Energy Business Models

Message from the Guest Editor

Sustainable development in energy is the object of interest of scholars and managers, who not only want to identify the current situation in energy and learn about its drivers, but who also want try and predict the possible future trends in business models on the energy market. In recent years, changes in the development of innovative energy business models have been observed that are related to trends in the business environment (customer behavior related to generation X, Y, and Z; development of new technologies, especially social media; changes in the political and legal environment; and the global pandemic). Currently, companies have to face challenges associated with change, including the Coronavirus pandemic, which requires the implementation of various business activities that help protect their competitive position. A very important challenge in this matter is finding innovative business models based on the concept of sustainable development.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba
Department of Mechanical and Industrial Engineering, University Niccolò Cusano, 00166 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
