REPER Recent Materials Engineering Performances

Message from the Guest Editors

We invite you to participate in the first inaugural Special Issue on materials engineering and materials processing technologies. We plan to periodically publish novel Special Issues to provide a platform for scientists from all over the world to freely exchange their views and scientific achievements. To guarantee the maintenance of a substantive and high scientific level, we plan to only allow outstanding scientists to evaluate the submitted material. We provide a substantially broad range of interests; however, we do not rule out the possibility that published articles may traverse beyond the defined scope.

The Special Issue subject concerns all groups of engineering and natural materials used in the manufacture of various utility products, including metal, ceramic, polymer, composite, porous, nanostructured materials, their characterization, and applications. Special Issues related to chemical substances that have not yet had practical applications found in the production of products or their characterization are not of interest.

We would like to cordially invite you to submit your work.
