

## Wireless Communications: Signal Processing Perspectives

Guest Editors:

**Prof. Dr. Sébastien Roy**

Department of Electrical and  
Computer Engineering, University  
of Sherbrooke, Sherbrooke, QC  
J1K 2R1, Canada

**Prof. Dr. Julian Cheng**

School of Engineering, The  
University of British Columbia,  
Kelowna, BC V1Y 8L6, Canada

**Prof. Dr. Jean-Yves Chouinard**

Department of Electrical and  
Computer Engineering, Laval  
University Québec, QC G1V 0A6,  
Canada

Deadline for manuscript  
submissions:

**17 July 2024**

### Message from the Guest Editors

Going forward, data volume will continue to increase rapidly, as will the logistic complexity of wireless networks, which are becoming increasingly heterogeneous and unpredictable. Furthermore, there is a push for ultra-reliable and low-latency communications, which imposes further constraints on the wireless infrastructure. In fact, the need for extremely low-latency responses implies that much of the processing will be pushed towards the network edge, thus radically changing the nature of the wireless domain and its cybersecurity aspects.

Meeting these challenges requires continuous innovation in the signal processing domain to continue leveraging the spatial dimension with increasing efficiency in conjunction with other techniques to yield the desirable traits of ultra-reliability, ultra-low latency, self-organization, scalability, and adaptability to changing environments, operating conditions and network demands. We therefore welcome unpublished original papers and comprehensive surveys on the above theme.

The Special Issue of interest include, but are not limited to:

- antenna selection
- massive MIMO
- green communications
- physical-layer security

## Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

*Entropy* is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
