Deadline for manuscript submissions:

**closed (31 October 2022)**

### Message from the Guest Editors

Dear Colleagues,

Machine learning and optimum stochastic control share similar objectives: to modify the dynamics of a complex stochastic dynamical system using measurement mediated feedback, to minimize the cost function of the output. Quantum control is now a mature subject and includes, in addition to the analogue of classical measurement-based control, a number of uniquely quantum protocols based on coherent control. In this Special Issue, we request papers addressing the role of measurement/coherent quantum control for quantum machine learning. Topics will include:

Noisy intermediate scale quantum (NISQ) learning machines using quantum control for training.

Quantum thermodynamics in quantum machine learning.

Coherent control schemes for quantum machine learning.

The role of quantum information in quantum machine learning.

Coherent Ising machines and similar models.

Quantum machine learning as large scale dissipative many-body systems.

Design protocols for dissipative quantum machine learning.

## Editor-in-Chief

### Prof. Dr. Kevin H. Knuth

Department of Physics, University  
at Albany, 1400 Washington  
Avenue, Albany, NY 12222, USA

## Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

*Entropy* is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (*Mathematical Physics*)
