Deadline for manuscript
submissions:

closed (20 February 2022)

Message from the Guest Editors

Dear Colleagues,

Autonomous intelligent visual identity, analysis, diagnosis, and decision making in a complex natural environment are a hot research field today. For traditional visual identity, analysis, diagnosis, and decision-making algorithms, technicians with a large amount of knowledge in engineering technology and the professional domain are required to model visual recognition. In addition, in cases where the constraint conditions are described by fuzzy sets, fuzzy programming can seek extreme values of the fuzzy target. However, agents trained through deep learning methods have better generality. Fuzzy theory combines deep learning to obtain a fuzzy deep network model to achieve a better performance, which is also a current development trend.

This Special Issue aims to serve as a forum for the presentation of new and improved techniques of information theory for autonomous intelligent visual identity, analysis, diagnosis, and decision making. In particular, the analysis and interpretation of generalization and superiority of the system with the help of statistical tools based on deep learning applications falls within the scope of this Special Issue.

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
