Message from the Guest Editor

Dear Colleagues,

Information theory and probability, statistical learning theory, statistical signal processing, and other related disciplines greatly benefit from non-negative measures of dissimilarity (i.e., divergence measures) between pairs of probability measures defined on the same measurable space. Exploring the mathematical foundations of divergence measures (e.g., Bregman, Renyi, and f-divergences), and their potential applications in new information-theoretic and statistical problems is of interest, and many interesting results involve the use of these generalized divergence measures.

This Special Issue encourages research and survey papers on the mathematical properties and applications of divergence measures from an information-theoretic perspective.

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
